

WINDOW PERF CARE SHEET

Revised 04/2008

EFFECTS OF CONDENSATION ON VISION QUALITY OF WINDOW PERF GRAPHICS:

Rainfall, snowfall and car washes can fill the small perforations in your window perf graphics. This can cause reduced vision until drying occurs.

SPECIAL NOTE FOR SLIDING REAR WINDOW INSTALLATIONS:

If your vehicle is equipped with a sliding rear cab window, it is recommended that you wait one week before sliding the window. This will ensure that the pressure-sensitive adhesive is securely attached to the glass.

CAR WASHING:

1. **Avoid washing your window perf graphic for the first 30 days after it is installed.**
After this time, hand wash your window perf graphic for best results.
See our vehicle Graphics Care and Maintenance Sheet for more information.
2. **High pressure power washing:**
If you are using a do-it-yourself car wash, do not hold the wash wand closer than twenty (20") inches to the window perf surface. Use the same care that you would with any pin striping or vinyl graphics on your vehicle and you should enjoy years of use from your window perf image.
See our Vehicle Graphics Care and Maintenance Sheet for more information.
3. **NOTE:**
Do not use abrasive cleaners on the image.
Rear window mounted wiper blades will cause premature wear of the image.

WINTER USE:

1. **Avoid using ice scrapers on the image as this may damage the vinyl.**
2. **Heated rear windows:**
Heated rear window systems will not cause any damage to your window perf graphic.
Use of your rear defroster will help speed up the drying of your glass during wet weather use.
